

15 May 1959

ANNEX C

GEOGRAPHIC INTELLIGENCE ANNEX
TO THE
GLOBAL WAR PLAN FOR THE DD/I AREA

(Prepared by ORR)

I. General

- A. Purpose. To define ORR's mission of providing geographic intelligence and specialized cartographic, map reference, and map procurement services in the event of global war.
- B. Assumptions. The assumptions of this Annex are the basic assumptions set forth in the Global War Plan for the DD/I Area.

II. Wartime Mission

The AD/RR in the field of geographic intelligence and related specialized services will:

- A. Provide geographic intelligence support and related specialized services required:

1. By (a) the DD/I (and through him by the NSC) and the DCI, (b) the USIB and supporting staffs and committees, (c) the Current Intelligence Center, and (d) other intelligence production components of CIA in support of national policy determination and strategic war planning.

[Involving probable emphasis on regional analyses contributing to broad aspects of strategic planning; geographical contributions to the analysis of specific critical areas; and preparation of specialized maps for use in planning, briefing, and for inclusion in high-level intelligence studies.]

2. By the DD/I and the DCI, the Current Intelligence Center, the DD/P, and appropriate components of the military services in support of target analysis, tactical intelligence, and unconventional warfare field operations.

- a. Provide detailed area analyses and targeting studies in support of unconventional warfare operations.

- b. Contribute as appropriate to target analyses undertaken by other components of CIA, particularly in the economic intelligence field.
 - c. Contribute to the escape and evasion programs of CIA and the Armed Services by providing coordinated geographic intelligence.
 - d. Provide specialized assistance in the selection and utilization of map source material required for specialized intelligence production undertaken by CIA and other USIB agencies.
 - e. Compile and construct maps and charts as required.
- B. Provide map intelligence support to the NIS Program and to USIB agencies.
- C. Continue the existing coordination of the map procurement efforts of the U.S. Government through the Department of State, including the
- 25X1C4a [REDACTED]
- [Under a wartime situation, this will probably involve the reassignment of some of the [REDACTED] new base posts.] 25X1C4a
- D. Assist in field collection of maps, and in the exploitation of captured maps in theaters of operations in support of the intelligence needs of USIB agencies. (See SR 380-350-1 and SR 380-350-2.)
- E. Maintain an expanded cartographic service in support of CIA activity, the NSC, the President's World Situation Room, the Department of State, other planning groups as appropriate, and the NIS Program.
- F. Maintain a current collection of foreign maps, charts, air target materials, and related documents on foreign areas, together with associated reference services, for support to CIA, the Department of State, and other authorized users as appropriate.
- G. Undertake such other services of common concern as the DD/I may direct.

III. Phases of Accomplishment

A. Pre M-Day

1. The production of geographic intelligence and the provision of specialized cartographic and map reference services, as well as the coordination of foreign map procurement will be continued without change under present directives and operating procedures.
2. Necessary agreements will be obtained to permit the establishment and operation of a CIA map collection effort in theaters of operations. Such agreements will take into consideration the planned wartime operation of the Armed Services Document Information Center and other recognized relationships between CIA and the Armed Forces in theaters of war. (See SR 380-350-1 and SR 380-350-2)
3. Necessary arrangements and agreements will be made with other agencies to insure cooperation on wartime geographic intelligence tasks in the ZI.

[This will involve negotiation and maintenance of relationships with Army Map Service, Aeronautical Chart and Information Center, and other major cooperating agencies concerning their emergency relocation sites and anticipated method of operation in wartime.]

Note: Army Map Service, in the event evacuation of its Washington plant is necessary, will conduct its mapping operations from its Field Office, Building 4011, San Antonio Air Force Station, 2100 North Braunfels Avenue, San Antonio 8, Texas. Its geographic intelligence work, done by the Engineer Strategic Intelligence Division, will be moved to Fort Lee, Virginia. AMS has its own depository in the U.S. Naval Personnel Center, 30th and Fort Streets, Omaha 11, Nebraska. In addition, AMS has active field office divisions at the following sites:

1405 W. Broadway
Louisville, Kentucky

625 Hardesty Avenue
Kansas City 24, Missouri

Brookside Avenue
West Warwick, Rhode Island

25X1A5a1

4. Personnel and equipment requirements in support of the War Plan provided by this Annex will be kept under review and revised as necessary. (See ORR Mobilization Plan.)
5. Continuing attention will be paid to the depositing of vital geographic intelligence materials at the Emergency Relocation Center.
6. Training
 - a. Will continue to participate in "Alert" exercises at the CIA Emergency Relocation Center to test (1) adequacy and balance of selected staff, (2) procedures, (3) effectiveness of support to other CIA and USIB emergency elements, and (4) adequacy of facilities and intelligence source materials for conducting emergency functions.
 - b. Will strive to increase readiness of selected personnel carried in civilian reserve status through short-term employment as consultants or through participation in the CIA Civilian Specialist Reserve Program.

B. Initial Wartime Operation

1. If evacuation from Washington is necessary, deploy to Emergency Relocation Center, carrying out the initial post D-Day wartime geographic intelligence mission within the limitations imposed by the emergency facilities and organization.
2. Contribute to intelligence evaluations of the current situation by providing geographic intelligence support and specialized cartographic and map reference services.
3. Verify arrangements and agreements with other agencies for wartime operations and initiate action as required.

[Involving verification of understandings regarding supply of maps and related materials by AMS, ACIC, and other major suppliers; and verification of understandings regarding coordination of map procurement activities.]
4. Provide such other services of common concern as the DD/I may direct.

5. Implement the ORR Mobilization Plan by taking initial action for converting military reservists to military status, the phased calling in of CIA civilian reserve personnel, obtaining the assignment of military personnel from the Armed Services, and augmenting the civilian strength in terms of mobilization requirements. (See ORR Mobilization Plan.)
6. Initiate training of augmented staffs for effective performance of their duties.

C. Post D-Day Build-Up

1. Continue to contribute to intelligence evaluations and estimates on the current situation.
2. Implement as rapidly as possible all aspects of the wartime mission of the AD/RR in the field of geographic intelligence and specialized services.

[Involving probable emphasis initially on expanded geographic support of "spot requests" for area analysis, and an increase in requests for assistance from the map reference service; concurrently, increase in requests for cartographic services and geographic intelligence support for unconventional warfare operations and economic warfare targeting.]

3. Continue build-up toward planned mobilization strength and re-evaluate personnel and equipment needs as functions and requirements become more fully clarified.
4. Maintain readiness to send map collection, geographic research, and cartographic teams to overseas Theater Headquarters as required by the developing situation.
5. Continue necessary training on an expanded scale.
